#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

This Office Action is in response to Applicants communication of 12/01/2003.

Currently claims 1-20 are pending and rejected in this office action.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Wittenberger et al. (U.S. Patent Number 6,106,518).

Wittenberger '518 discloses an articulating catheter and method for cryoablating target tissue with a thermally conductive tube with a plurality of transverse notches, (134) three or more, with first and second edges (134,148,150, 144, see figures 13-14), a means for advancing a tube to a treatment site by catheter tube (204) and a means for reconfiguring the tube from a first cylindrical configuration to a second juxtaposed edges conforming form (figure 13-14 specifically figure 14 elements 134), further a cryo-element (10) and expanding chamber to cool the tube. Concerning claims 2 and 10, Wittenberger discloses that the first and second edges of each notch meet at first and second corners and the notches are arranged with the first corner of each notch lying along a common line that extends parallel to the longitudinal axis. Concerning claims 3,11, and 17, the Wittenberger tube and resilient members may be made of stainless steel (paragraphs at column 8). Further concerning claims 6,7,13,14, and 20,

Art Unit: 3767

Wittenberger discloses that there is a reconfiguring pull-wire (270) attached to the distal end of the tube.
